Aboubakr Omar Ibnelkhatab Mohamed

Software QA and Testing Engineer

bakromer23@gmail.com | 01554247786 | Zagazig, Egypt | linkedin.com/in/eng-abo-bakr-omer | github.com/abobakr-omer

Profile

ISTQB-certified Software QA and Testing Engineer with professional software testing experience since September 2024 across web, mobile, API, and database workflows. Hands-on experience with Java, Selenium WebDriver, TestNG, SHAFT, Postman, and MySQL. Design and execute functional, regression, and end-to-end tests, investigate defects with developers, and verify fixes during Agile delivery. Complement QA experience with practical Java backend development and automation framework training.

Experience

Software QC Engineer, Sheen Information Technology

Nov 2025 - Present

- Test the NDC Admin Panel and Portal across web, API, and database workflows, checking application behavior against business requirements.
- Analyze requirements and translate administrative and portal workflows into functional, regression, and end-to-end test cases.
- Develop and execute automated tests using the SHAFT framework to validate application workflows alongside manual testing.
- Use MySQL queries to validate stored application data and business rules, checking consistency between database records and expected system behavior.
- Document test cases and report defects in Azure DevOps; track issues through investigation, correction, and retesting.
- Collaborate with developers to reproduce failures, clarify observed behavior, verify fixes, and support release validation.

Software QC Engineer, Asgatech

Nov 2024 - Nov 2025

- Tested the Najm Internal Portal and mobile application across web, Android, and iOS, covering user workflows and integrated application behavior.
- Designed and executed functional and regression test scenarios to verify requirements and check existing behavior after software changes.
- Automated web business workflows using Java, Selenium WebDriver, and TestNG, complementing manual test execution.
- Used Postman to test mobile APIs and verify integrations, investigating API behavior alongside issues observed in the application.
- Created test cases and recorded defects in TFS, following up on reported issues and verifying corrections through retesting.
- Worked with developers during Agile sprints to reproduce issues, investigate failures, and validate fixes across the affected workflows.

Part-Time Software Tester, Qabilah Company

Sep 2024 - Nov 2024

- Performed functional testing of the Qabilah website and designed test cases around key user workflows and expected application behavior.
- Executed automated web tests using Selenium WebDriver alongside manual checks of website functionality.
- Validated REST API behavior using Postman and investigated issues found during functional and API testing.
- Reported defects and followed their resolution through Jira and Trello, coordinating the verification of corrected behavior.
- Retested fixes and ran regression tests after deployments to check that existing workflows continued to function as expected.

QC Site Engineer, Al-Rawaa Company

Jan 2023 - Jan 2024

- Conducted site inspections and checked completed work against project specifications and quality requirements.
- Documented quality observations and non-conformities, coordinated corrective actions with relevant teams, and verified the resulting corrections.

Skills

Test automation	Java, Selenium WebDriver, TestNG, SHAFT; Playwright and TypeScript in portfolio work; Allure; GitHub Actions through training.
API and database testing	REST APIs, Postman, SQL, MySQL, data validation, business-rule verification, and integration testing.
Testing methods	Functional, regression, end-to-end, exploratory, cross-browser, Android and iOS testing; boundary value analysis, equivalence partitioning, decision tables, and risk-based testing.
QA delivery	Requirements analysis, test-case design, defect lifecycle, retesting, release validation, Agile/Scrum, Jira, Azure DevOps, TFS, Trello, Git, and GitHub.
Additional knowledge	Performance testing and JMeter; Java OOP, JDBC, Servlets/JSP, and Oracle SQL.

Projects

OrangeHRM AI-Assisted UI QA | Playwright, TypeScript

Created an AI-assisted UI QA workflow covering authentication and employee management, with test design, page objects, execution evidence, defect classification, and traceability. Automated 26 scenarios; the published run records 25 passes and one failure retained for a documented product defect.

Selenium Page Object Model | Java, Selenium, TestNG, Allure

Implemented reusable page objects, browser factories, JSON test data, and Allure reporting for SauceDemo login scenarios, with a successful-login URL assertion and screenshot utilities.

E-Wallet Web Application | Java, Servlets, JSP, JDBC, Oracle

Built account and wallet workflows, including deposit, withdrawal, and transfer. Implemented prepared SQL statements, insufficient-balance checks, and transaction commit/rollback for transfers.

AVR Fire Detection System | Embedded C, ATmega32

Implemented temperature and smoke monitoring with ADC/DIO drivers, LCD status, keypad reset, and LED, buzzer, and motor outputs across normal, heat, and fire states.

Internships and Training

Automation Testing Intern, Nezam Academy

May 2025 - Aug 2025

- Practiced Java, Selenium, TestNG, framework design, Allure reporting, Git/GitHub, and CI/CD with GitHub Actions.

Java Backend Developer Intern, EraaSoft

Mar 2026 - Present

- Complete practical Java, SQL, JDBC, Servlets/JSP, Spring, and Hibernate/JPA assignments. Portfolio: github.com/abobakr-omer/EraaSoft_Tasks.

Software Testing Training | 2024

Digital Egypt Pioneers Initiative (Jun - Nov 2024) and Nezam Academy: practical training in manual, API, mobile, Agile, database, performance, and automated testing.

Certifications

ISTQB CT-MAT - Mobile Application Testing | Oct 2025 | Certificate 251007014

ISTQB CTFL v4 - Foundation Level | Nov 2024 | Certificate 241023005

Digital Egypt Pioneers - Software Testing Track | MCIT | 2024

Education

B.Sc. in Electrical Engineering | Zagazig University | 2017 - 2022
Very Good with Honors (78.52%). Graduation project: Smart Home Energy Management System using AVR (ATmega32), graded Excellent.

Languages

Arabic: Native | English: Professional working proficiency
